Withings Body+ Description

Overview

The Withings Body+ allows you to easily track your weight and monitor your progress. Additionally, it calculates your fat mass, muscle mass, bone mass and water mass by bioelectric impedance to inform you about your body composition.

Of course that's not all your Withings Body+ does. If you activate the Weather screen, you also get your daily weather report everytime you weigh in.

Because the Withings Body+ is a connected scale, its true potential is achieved when you use it along with the Withings Health Mate® app. Beside allowing you to install your scale, the Withings Health Mate® app allows you to customize its display, to set a weight goal, and to check the entire history of your weight data.

Thanks to its in-app activity tracking feature and the numerous partner apps you can connect it to, the Withings Health Mate® app helps you reach your health goals faster by helping you track your activity and check your calorie balance.

Using Your Withings Body+

Tracking your weight and body composition

Overview

The Withings Body+ allows you to track your weight and lets you see how your weight trend changes over time. Beside your weight, it also allows you to check your body composition (fat mass, muscle mass, bone mass and water mass) which gives you a better idea of your level of fitness.

Make sure you follow the recommendations below to get accurate and representative weight measurements:

- Make sure you always weigh yourself around the same time to improve the consistency of your measurements.
- Wait five seconds before weighing yourself if you have just moved your scale.
- If your scale is on a carpet, make sure you're using the carpet feet. Refer to [“” on page 47](#) for more information.

Weighing yourself

Thanks to the Position Control™ technology, getting an accurate weight measurement has never been easier. If your weight is not properly distributed on your Withings Body+, arrows are displayed on the scale to indicate in which direction you should lean to stabilize your weight.

If several users have a similar weight, the following screen can be displayed:

Simply lean left or right to select the correct name. Your measurements will then be affected to the correct user.

If you want to get information regarding your body composition as well, make sure that:

- Body composition measurements are enabled. Refer to [“Disabling body composition measurements” on page 26](#) for more information.
- All the body composition screens are enabled. Refer to [“Changing the screen order” on page 23](#) for more information.
- You step on the scale barefoot.
- You stay as still as possible during the measurement.
- You are recognized by your Withings Body+, with your name appearing on the screen display.

Retrieving your weight data

As soon as you weigh yourself, your weight is displayed on the display of your scale. If you’ve activated the Weight Trend screen, you’ll also see a graph showing your eight last measurements as well as the difference between the latest measurement and the previous one. Refer to [“Changing the screen order” on page 23](#) for more information.

To see detailed graphs about your weight and body composition, and see your full history, you have to check your data on the Withings Health Mate® app.

You can access your graphs:

- By tapping the Weight widget on your Dashboard.
- By tapping any weight measurement item in your Timeline.

Once you’re viewing the weight graph, you can view your body composition graphs and your BMI graph.

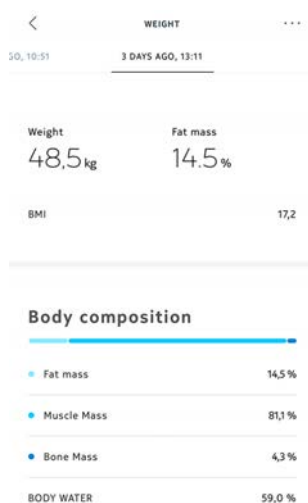

Changing your weight goal

To change your weight goal, perform the following steps:

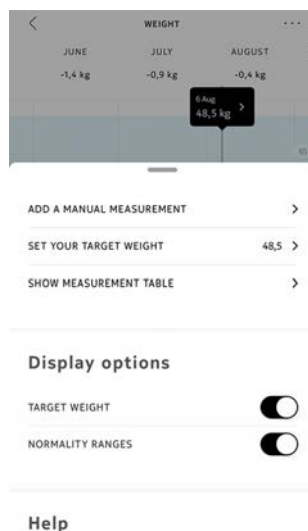

1. Open the Withings Health Mate® app.
2. Select a weight measurement in the Timeline.

3. Tap the three dots at the top right of the screen.

4. Tap **Set your target weight**.

5. Tap and slide up or down to select your target weight.

6. Tap **Next**.

7. Tap and slide up or down to select the pace at which you want to achieve your weight goal.

8. Tap **OK**.

Retrieving unknown measurements

If your Withings Body+ doesn't recognize you when you weigh in, your weight measurements will be listed as unknown measurements. To assign them to a user, perform the following steps:

1. Open the Withings Health Mate® app.
2. Go to **Devices**.

3. Select the **Unknown measurement**.

4. Tap the user you want to assign the measurement to.

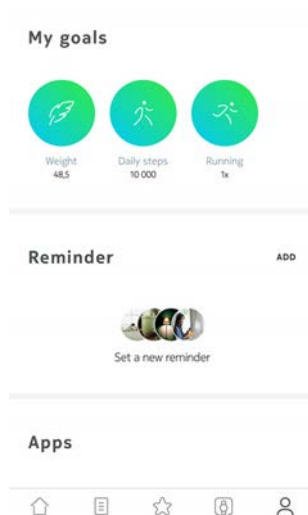

Your measurements are now assigned to the correct user. Your Withings Body+ will also be able to automatically assign your measurements the next time you weigh in.

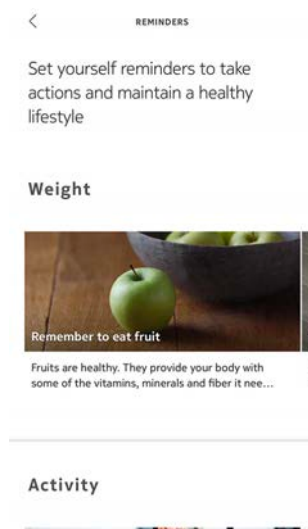

Setting reminders

The Withings Health Mate® app allows you to set reminders to make sure you weigh yourself regularly. To do so, perform the following steps:

1. Open the Withings Health Mate® app.
2. Go to **Profile**.
3. Tap **Add**.

4. Select the type of reminder you want to set.

5. Select the time and recurrence of the reminder.

Why?

Fruits are healthy. They provide your body with some of the vitamins, minerals and fiber it needs. They also help prevent a large number of diseases. Have some fruit in the morning to prevent any afternoon hunger attack and help avoid snacking.

When?

Set this reminder at a time when you are within easy reach of a fruit or right before your afternoon break.

Repeat: ☒ M ☒ T ☒ W ☒ T ☒ F ☒ S ☒ S Every day

At: 12:00 >

ADD

6. Tap **Add**.

Checking the weather

Overview

You can check the local weather forecast for the day directly on your Withings Body+ if the following conditions are met:

- Your Withings Body+ is set up in Wi-Fi. Refer to [“Changing the configuration of your Withings Body+” on page 19](#) for more information on how to switch to a Wi-Fi configuration.
- The Weather screen is enabled. Refer to [“Changing the screen order” on page 23](#) for more information.

Retrieving weather information

All you have to do to retrieve weather information on your Withings Body+ is to step on the scale and wait for the Weather screen to be displayed.

The Weather screen provides you with information about the average weather and temperature for the morning (between 6:00 AM and 12:00 PM) and for the afternoon (between 12:00 PM and 9:00 PM).

If you weigh yourself in the morning, the weather and temperature of the day is displayed. If you weigh after 7:00 PM, the weather and temperature of the next day is displayed.

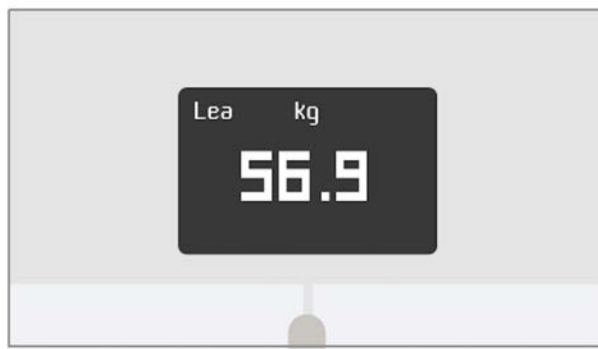

Using Baby mode

Baby mode allows you to find out the weight of your baby by weighing yourself on the scale while holding your baby. To use this mode, you must create a profile for your baby in the Withings Health Mate® app. Then enter the height and weight of your baby and weigh yourself while holding your baby in your arms. The weight of your baby will be automatically detected by the scale.

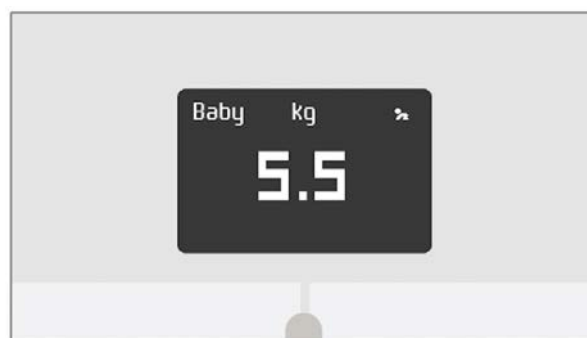

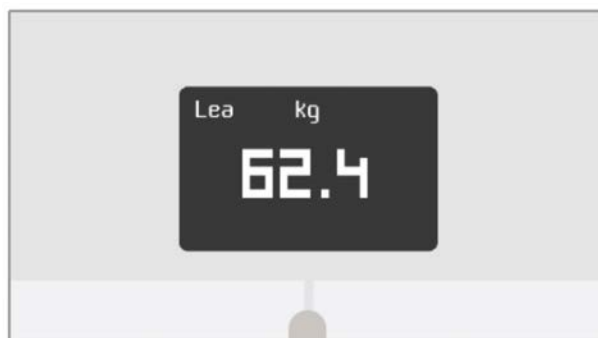

Important: your baby must weigh between 7 and 33 lbs (3 and 15 kg) to be detected by the scale. As Baby mode is enabled by default on the Withings Body+, you do not need to enable it in the Withings Health Mate® app.

Follow the steps below to use Baby mode:

1. Create a profile for your baby in the Withings Health Mate® app.
2. Enter the height and weight of your baby.
3. Weigh yourself on your own.
Your weight will be displayed on the screen of the Withings Body+.

4. Weigh yourself with your baby (within 5 minutes of first weighing yourself).
The scale will display your weight plus your baby's weight, followed by the weight of your baby on its own.

For best results, we recommend you to weigh yourself when your baby is calm.

Note: you can use Baby mode for several members of your family. For example, you may wish to add a profile for your baby to your account or create a separate account for your baby. Please note that you can add up to 8 users to your Withings account.

MyFitnessPal can also retrieve information from your Withings account: your weight and your calorie outtake.

Your calorie outtake is based on any activity data coming from a Withings activity tracker or the in-app tracking feature of the Withings Health Mate® app. Note that tracking your activity can be a great way to help you achieve your weight goal.

Connecting to MyFitnessPal

To connect your Withings account to your MyFitnessPal account, perform the following steps:

Syncing Your Data

Data from your Withings Body+ is automatically synced, without any action required on your part. Your weight data is synced with the Withings Health Mate® app within a few minutes after you weigh in.

Note that if you sync your data in Bluetooth, it is necessary that a paired device is within range of the scale. The Withings Health Mate® app also needs to be running on your device.

Dissociating Your Withings Body+

All data that wasn't synced before dissociating your Withings Body+ will be lost permanently.

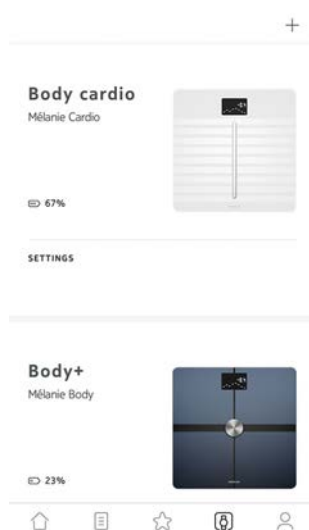

Dissociating your Withings Body+ allows you to remove it from your account.

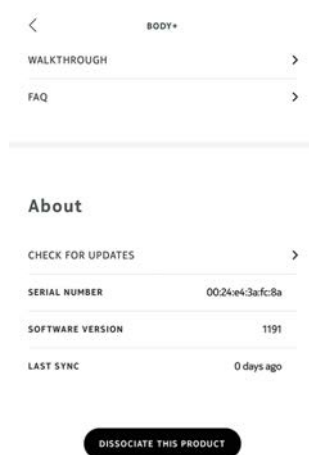

Dissociating your Withings Body+ will not remove any of the data that was synced from the Withings Health Mate® app.

To dissociate your Withings Body+, perform the following steps:

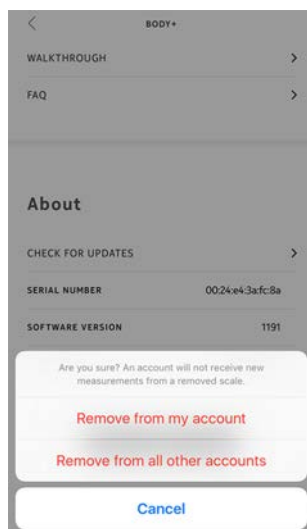

1. Open the Withings Health Mate® app.
2. Go to **Devices**.
3. Tap **Body+**.

4. Tap **Dissociate this product**.

Performing a Factory Reset of Your Withings Body+

All data that wasn't synced before factory resetting your Withings Body+ will be lost permanently.

Factory resetting your Withings Body+ allows you to delete the data stored on it. Factory resetting completes the dissociation process.

Factory resetting your Withings Body+ will not remove any of the data from the Withings Health Mate® app.

1. Go to the Bluetooth settings of your device and “forget” your Withings Body+ from the list of Bluetooth devices.
2. Remove one of the batteries for ten seconds.
3. Put the battery back.
4. When “Hello” appears on the display of your scale, press and hold the button at the back of the scale until the factory reset gauge fills.
The scale's screen will display the word “Factory”, confirming the reset.

At this time, you can start the installation process for the Withings Body+. Refer to [“Setting Up the Withings Body+” on page 8](#) for more information.

Cleaning and Maintenance

Cleaning your Withings Body+

You can clean your Withings Body+ using a cloth dampened with water. If water is not enough to clean it, you can also use crystal vinegar.

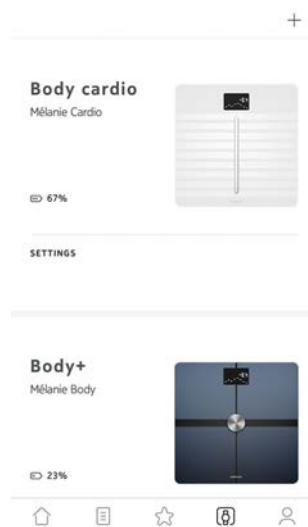

The use of any detergents or cleaners may cause irreversible damage to the coating that protects the electrodes used to measure your body composition.

Changing the batteries

Your Withings Body+ uses 4 standard AAA batteries and has a battery life of approximately 2 years. To check the battery level of your Withings Body+, perform the following steps:

1. Open the Withings Health Mate® app.
2. Go to **Devices**.

3. Check the battery level displayed on the left of your scale.

If the battery level is below 20% and you're having syncing issues, we advise that you change the batteries.

Installing the carpet feet

If you are using your Withings Body+ on a carpet, we recommend that you use the carpet feet included with your scale. To do so, perform the following steps:

1. Remove the tab on the underside of each carpet foot.

2. Stick the carpet feet to the pegs on the underside of the Withings Body+.

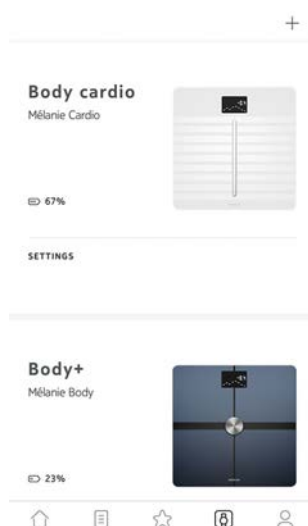

Updating your Withings Body+

We regularly offer updates so that you can benefit from the latest features we add to our products. When new internal software is available, it is automatically installed without any prompt from the Withings Health Mate® app if your scale is installed in Wi-Fi.

Technology Description

Weight

Your weight is measured thanks to four weight sensors placed below the surface of your Withings Body+.

Body Composition

Your body composition (fat mass and water percentage, muscle mass, and bone mass) is measured by bioelectrical impedance analysis due to electrodes placed below the surface of your Withings Body+. These electrodes send a small current that goes through your body, and then analyze the way your body reacts to measure these body composition metrics.
